

## MEASURING STUDENT LEARNING IN 2021: What will be Different in New York?

Since COVID-19 first led to sudden school closures in 2020, families have stepped up in unprecedented ways to support learning at home as students began learning remotely. Teachers and leaders have worked hard to put plans in place to ensure students are safe, offering students across New York different learning models—remote, hybrid and in-person, with some school districts transitioning between them as circumstances demanded. But the unprecedented changes in learning have impacted students in many ways, from their relationships with peers and social emotional growth to academics.

This year, it is more important than ever to measure student learning to understand the impact that COVID-19 and different learning models have had on students. This is especially important for families, who need objective information about how well their child learned grade-level skills so they can better support learning at home. State tests are only one of many ways to measure student learning, families, schools and leaders need the objective and actionable information the state test provides to identify any learning gaps to best support students and fully recover from the pandemic. While New York students may not take the New York State Assessments or Regents exam this spring, families should talk with teachers before summer to discuss other measures that may be available and whether their child met the expectations of the grade level.

### How will State Tests be Different in 2021?

Knowing that the pandemic has deeply affected students, teachers and schools, the state tests will be different than in the past. New York has asked the U.S. Department of Education to cancel the New York State Assessments and Regents for 2021. If this is not approved, students will be required to take the tests. As of March 2021, the following changes have been made:

- **To reduce stress for teachers and students in an already challenging year, results from the state tests will not be used to rate schools or districts as they have in the past.**
- **The tests will be shorter. Students in third through eighth grade will only take part of the traditional math and English language arts test, and fourth and eighth grade students will only take the written part of the science test.**
- **Only 4 Regents exams will be given: Algebra 1, English, Living Environment and Earth Science. Students graduating this year will not be required to pass 5 Regents exams to earn their diploma.**
