MEASURING STUDENT LEARNING IN 2021: What will be Different in Washington?

Since COVID-19 first led to sudden school closures in 2020, families have stepped up in unprecedented ways to support learning at home as students began learning remotely. Teachers and leaders have worked hard to put plans in place to ensure students are safe, offering students across Washington different learning models—remote, hybrid and in-person, with some school districts transitioning between them as circumstances demanded. But the unprecedented changes in learning have impacted students in many ways, from their relationships with peers and social emotional growth to academics.

This year, it is more important than ever to measure student learning to understand the impact that COVID-19 and different learning models have had on students. This is especially important for families, who need objective information about how well their child learned grade-level skills so they can better support learning at home. To measure learning, students will take the Smarter Balanced tests this spring. While state tests are only one of many ways to measure student learning, families, schools and leaders need the objective and actionable information the state test provides to identify any learning gaps to best support students and fully recover from the pandemic.

How will State Tests be Different in 2021?

Knowing that the pandemic has deeply affected students, teachers and schools, the state tests will be different than in the past. The results will be used for learning purposes only in 2021. As of March 2021, the following changes have been made:

- The state is considering randomly selecting a small group, or sample, of students to take the state tests in third, fifth, eighth and tenth grade. Decision makers will be able to draw conclusions on how students across the state did based on the sample, but families will not receive individual reports for their children.

- To reduce stress for teachers and students in an already challenging year, Smarter Balanced results will not be used to rate schools or districts as they have in the past.

- Districts can waive the pathway option of reaching a scoring Level 3 or above on the Smarter Balanced test for this year's graduating class.

- While students will be required to take the test in-person, many districts will have plans to test students learning remotely separately from classmates learning in person. Schools may use staggered schedules or test in areas outside the classroom, such as gyms or cafeterias, to allow for more social distance.
