State Assessments 101

The Every Student Succeeds Act, or ESSA, requires students to take state tests in reading and math every year in third through eighth grade and once in high school. In Minnesota, students in third through eighth grade take the Minnesota Comprehensive Assessment (MCA) in reading and math. Students in fifth and eighth grade also take the MCA in science.

High school students take the MCA in reading in 10th grade and math in 11th grade. They also take the MCA in science after completing a life science or Biology course.
A Focus on Grade Level Skills

Unlike other tests, the MCA is focused on grade-level material and is aligned to the state standards. The test questions match what students do and learn in the classroom everyday throughout the year, which are the skills that are most important for students to learn in order to move on to more challenging content.

The MCA is taken online and is computer adaptive, which means it adjusts the difficulty of the questions based on the student’s responses. The test includes a variety of questions, including traditional multiple choice, open-ended questions and questions that ask students to justify their answer. Minnesota teachers have worked closely with the state to provide input into test questions.

Grade 3: ELA
Which meaning best fits the way spread is used in paragraph 2?

Select the meaning that best fits the way spread is used.

Then, select the phrase that best supports the meaning.

Meaning

To open over a larger area
(to spread out a map)

To stretch out; extend
(to spread my arms wide)

To cover something
(to spread a cloth on the table)

To pass from person to person
(to spread the news rapidly)

Support phrase from Paragraph 2

In town, Madan learned to be a tailor. He worked hard and soon became known for the fine clothes he made. The entire town wanted clothes sewed by Madan. The more his fame spread, the more proud and boastful Madan became.
Useful Information for All

FAMILIES: Understanding Grade Level Performance

The MCA report gives families information on how well their child performed on different sets of skills in each subject. Families can use this information to identify where their child is doing well and where they may need support or practice. This helps families better support learning at home. It can also help them start meaningful conversations with teachers, to set goals for each student’s areas of improvement and to identify resources and strategies that can be used at home and in school to help students make progress.

Questions to Ask the Teacher about Your Child’s MCA Report:

- What does this mean about my child’s learning?
- Is my child on grade level?
- Where does my child need more support or improvement?
- What short-term learning goals should my child meet to show progress?
- How can I support learning at home?

TEACHERS: Informing Instruction

Students take different types of tests throughout the school year. Some students take benchmark or diagnostic tests, such as MAP Growth and i-Ready. These are taken several times a year and measure mastery of important concepts and skills in reading and math. Students take a test at the beginning of the year to identify their “starting point” and again throughout the year to measure their progress. Benchmark tests help teachers identify and address learning gaps early on so students can stay on track to meet grade level expectations. While the MCA is only given at the end of the school year, it is one way of showing how much progress students made from the beginning of the year and how well they met grade level expectations.

While teachers use MCA results to understand each student’s unique needs and support them in the areas where they need extra help, they also help teachers to improve their instruction. Teachers can use the results to look for trends in their students’ learning to see what skills or concepts students learned and what content they struggled with. This helps teachers identify what they taught effectively and where they need to improve or change their instructional strategies.
SCHOOL & DISTRICT LEADERS: Informing Decisions

MCA results are critical for school and district leaders to make informed decisions about schools and students. School and district level MCA scores show leaders how students across a school or district are performing and indicate if a certain group of students or schools need more support. This allows them to target additional support or resources to help those schools improve. District leaders can also use MCA scores to understand what strategies and changes are working.

STATE LEADERS: Helping Schools Improve

State leaders use MCA results to identify schools and districts that need more support and resources. They identify the schools with the lowest performance in the state, as well as schools with certain groups of students that performed much lower on the test than the rest of the students in that school. These schools receive additional funding and resources from the state to support students and teachers. For example, schools may hire more teachers or tutors or they may purchase additional instructional materials and programs, depending on the needs of their students.
